For retailers, the slow growth of the nation's E.V. charging infrastructure has presented an opportunity to attract more traffic by installing public chargers.

E.V. Chargers Finally Pay Off for Retailers

FROM FIRST BUSINESS PAGE

were installed. The effects were most pronounced for retailers within 150 meters. The researchers also found a 5 percent increase in spending.

Another recent study, published in Nature Communications, analyzed data from California, where E.V. ownership and charging infrastructure are more widespread than in other states. It found that installing chargers brought more modest increases in foot traffic and spending but that public E.V. stations "tend to attract higher-income, exploratory visitors and local residents," and in low-income areas they "enhance businesses." Some companies — notably

Walmart, the largest retailer in the United States - are seeing charging as a potentially profitable business in and of itself, not just as a spur for foot traffic and sales. They have begun building charging stations under their own brand names rather than relying on providers that lease a part of their parking lots to install and maintain the stations.

"Companies are beginning to see charging as something that can potentially help the bottom line," said Graham Evans, a director at S&P Global Mobility, an automotive market research firm. "It's going to become more ubiquitous rather than a token gesture."

The embrace of charging comes as more Americans — many of whom are worried about a warming planet - trade in their gaspowered cars. In 2023, 1.4 million plug-in electric vehicles were sold in the United States, more than 9 percent of all car sales that year and an increase of over 50 percent from 2022, according to Argonne National Laboratory, a federally funded research center.

And although the growth of E.V. sales has slowed this year, an estimated 346,309 of the vehicles were sold in the third quarter, nearly 9 percent of sales, according to Cox Automotive, a market research firm. (It is too soon to say what impact Donald J. Trump's election will have on sales, but during his campaign he vowed that if he became president he would end the Biden administration's policies that encourage E.V. manufacturing and sales.)

Some of the slowdown in E.V. sales this year can be chalked up to drivers who hesitate to trade in their gas-powered cars because of concerns about E.V. charging infrastructure, which has grown more slowly than E.V. sales. Broken chargers have been a problem: One in five ports does not work when motorists pull up, according to recent research led by a Harvard Business School fellow.

In total, over 200,000 public chargers are spread across about 74,000 stations, but more than a million public chargers will be needed by 2030 to keep up with E.V. sales, researchers at the National Renewable Energy Laboratory have estimated.

Even with the Biden administration's \$5 billion plan to fill in the infrastructure gap, a robust national network is still years away. Under that plan, states are required to submit proposals for charging operators and site hosts. Nearly 60 percent of the grants have gone to fuel and convenience stores, rest stops and service plazas, according to EVAdoption, a data and analytics firm. Still, only one in every 14 big-box locations offers charging, while one in every 15 grocery stores and one in every 40 department stores do, a Reports analysis Consumer found.

For many retailers, charging deficiencies present an opportunity: Truckers, ride-hailing drivers and people on long-distance trips

An estimated 346,309 electric vehicles were sold in the third quarter.

rely on public chargers, as do the 5 percent of E.V. owners who are not able to charge at home, many of whom live in apartment buildings and park on the street. The most frequently used public chargers are at retailers, according to a 2024 study of usage data by J.D. Power, a data analytics company.

Some landlords of shopping centers and malls have found that installing chargers on their properties has helped to attract new tenants, said Jim Hurless, a manig airector wno oversees the E.V. business at the real estate

But installing the chargers is complicated and expensive. The process involves surveying, engineering, permitting, connecting with local utilities, testing and inspection — and can take up to 18 months from start to finish. Slower chargers — considered a good fit for cinemas and hotels. where a customer parks for a few hours or overnight — can cost up to \$7,000 to install. Fast chargers, which can provide a significant charge in 20 minutes, can cost as much as \$175,000.

Many retailers turn the project over to a charging company that pays them a monthly fee for the parking spaces used while retaining any revenue from customers. And those providers have been installing more, and faster, chargers and promising a more reliable, and in some cases plusher, customer experience than in the

Mercedes-Benz is investing \$1 billion on the first phase of a new network of high-speed chargers that can accommodate all brands of vehicles. Its charging stations will have lounges - and landscaping — at some locations. The automaker has installed charging hubs at a dozen Buc-ee's gas and convenience stores in the Southeast, with plans to expand to more than 40 additional sites. Starbucks, which had Volvo install 15 stations on properties between Seattle and Denver, will work with Mercedes to add 100 more, including on Interstate 5 on the West

Some charging companies are developing methods to speed up installations. EVgo has begun to experiment with a prefabricated model, with its first installation at a site in League City, Texas, in

But some retailers, like the convenience-store chains 7-Eleven and RaceTrac, are seeking to take control over — and monetize charging by building their own

For several years, Walmart has worked with Electrify America, a division of Volkswagen, and now has Electrify America stations at 280 of the retailer's stores. When Walmart tested its own chargers at stores near its Bentonville, Ark., headquarters and in a town near Dallas, it found demand surprisingly strong, said Vishal Kapadia, the company's senior vice president for energy transforma-

"There is a need for this infrastructure in many pockets," he

The company is rolling out 15 stations in the Dallas-Fort Worth area and 10 in Phoenix, and it plans to have thousands across the country by 2030. Walmart expects to spend \$1 million to \$1.5 million at each site.

"Charging can be a profitable stand-alone business," Mr. Kapadia said. "The ancillary benefits are driving traffic to our loca-

Even Costco, one of the first retailers to install charging stations in the 1990s, before ripping them out in 2011 because the company said they were rarely used, has recently returned to E.V. charging.

Hannaford, a Northeast grocer with charging stations at 24 of 189 stores - including the one Ms. Leary frequents — got into the charging business because it was "how we want to present ourselves," said George Parmenter, health and sustainability lead at Hannaford.

Mr. Parmenter said he did not know to what extent charging led to in-store sales, but he noted that a Tesla charging station at a Hannaford store in Portland, Maine, averaged about 2,000 charging sessions a month.

"I don't know what else you could do to get that many people to show up," he added.

Brent Gruber, executive director of E.V. practice at J.D. Power, said: "Fifteen years ago it may have not made the most sense to add charging. Now it makes sense."

New Space Age Material Luckily Grows on Trees

FROM FIRST BUSINESS PAGE

word for wood, lignum, could open the door to other uses for wood in space. The idea originated in 2017 from a question posed by Takao Doi, a Japanese engineer and former NASA astronaut: Could a human society living in space grow trees as renewable building ma-

"We were trying to think about how to build something on the moon with wood," Mr. Murata said in an interview. But they needed to verify whether wood could be used in space. The following year, Mr. Doi began talking about how, about a hundred years ago, airplanes had been built with wood. "So why not make a satellite with wood, too?" Mr. Murata said.

What began as an impulsive idea evolved into a serious scientific endeavor, he said. Mr. Doi and a group of scientists at Kyoto University and Sumitomo Forestry, one of Japan's oldest timber companies, set out to determine the best wood to send to space.

They tested three types: birch, cherry and magnolia. The samples were sent in 2022 to the International Space Station, where they spent nearly eight months and were exposed to extreme temperatures, "intense cosmic rays and dangerous solar parti-

"Tests confirmed no decomposition or deformations, such as cracking, warping, peeling or surface damage," the researchers wrote in January.

The team selected magnolia for its lightweight properties and resistance to cracking. The wood was processed using a centuriesold Japanese woodworking technique called "sashimono," which uses intricate joints instead of screws, nails or glue to assemble furniture and wooden buildings.

Two master carpenters in Kyoto, who usually restore historical buildings like Nijo Castle, were enlisted to work on the satellite, Mr. Murata said. Using traditional tools, like saws and chisels, they crafted the wooden components that would eventually orbit Earth.

"Nobody had ever thought about using wood for rocket science before," Mr. Murata said. "Many engineers thought wood was old technology and couldn't be applied to cutting-edge tech-A group of researchers in Fin-

land said in 2021 that it was on a similar mission to launch a wooden satellite, using birch plywood. But their satellite has not yet been sent to space. The Japanese project wasn't

without its challenges, either. Wood's tendency to shrink and deform unevenly when it loses moisture required careful engineering considerations. The final design also needed to be approved by both the Japan Aerospace Exploration Agency and NASA, which was involved in launching the sat-

"There was a lot of debate because this material had never been used before," Mr. Murata

Once in orbit, LignoSat's wood will be tested for six months before it burns up in Earth's atmosphere, he said. Scientists will monitor how much the wood expands and contracts in space and how accurately the geomagnetic field can be measured inside a wooden structure.

The project could also help ad-

'Nobody had ever thought about using wood for rocket science before.

Koji Murata, a professor of forest and biomaterials science at Kyoto University.

dress a growing problem in space exploration: environmental impact. When metal satellites burn up in the atmosphere, they release pollutants like aluminum oxide that damage the ozone layer. But burning wood simply produces water vapor and carbon dioxide, a cleaner byproduct, Mr. Murata

A lot can go wrong while the satellite is in space. Its solar panels may stop operating, and the batteries may overheat or freeze in an environment where temperatures can fluctuate from 212 degrees to minus 148 degrees Fahrenheit every hour or so.

But as far as the wood is concerned, Mr. Murata isn't worried. He said that tests had already shown that wood does not deterio-

Looking ahead, Mr. Murata said the team envisioned larger wooden satellites. Farther in the future, he said his ambitions extended bevond Earth's orbit.

"I am hoping to grow wood on Mars," he said.

The goal appears far-fetched today. But he is no stranger to achieving the implausible.

"I used to think it was impossible to send anything made of wood to space," he said.

IN THE UNITED STATES BANKRUPTCY COURT

NOTICE OF HEARING TO CONSIDER CONFIRMATION OF THE DEBTORS' SECOND AMENDED JOINT CHAPTER 11 PLAN AND RELATED VOTING AND OBJECTION DEADLINES
PLEASE TAKE NOTICE THAT on November 22, 2024, the United States

Bankruptcy Court for the District of Delaware (the "Bankruptcy Court" entered an order [Docket No. 5024] (the "Disclosure Statement Order" (a) authorizing Yellow Corporation and its affiliated debtors and debtors in possession (co<mark>ll</mark>ective<mark>ly,</mark> the <u>"Debtors"</u>) to solicit votes on the *Secona* Amended Joint Chapter 11 Plan of Yellow Corporation and Its Debtor Affiliates Pursuant to Chapter 11 of the Bankruptcy Code [Docket No. 5028] (as may be altered, amended, modified, or supplemented from time to time, th "Plan");2 (b) approving the Second Amended Disclosure Statement for the nd Amended Joint Chapter 11 Plan of Yellow Corporation and Its Debto Affiliates Pursuant to Chapter 11 of the Bankruptcy Code [Docket No. 5027] (as may be amended, supplemented, or modified from time to time, the "Disclosure Statement") as containing "adequate information" pursuant to section 1125 of the Bankruptcy Code; (c) approving the solicitation materials and documents to be included in the solicitation packages' (the "Solicitation Packages"); and (d) approving procedures for soliciting, receiving, and tabulating votes on the Plan.

eceiving, and tabulating votes on the Plan.

PLEASE TAKE FURTHER NOTICE THAT the hearing at which the Bankrupty Court will consider Confirmation of the Plan (the <u>"Confirmation Hearing"</u>) will commence on <u>February 4,0025, at 2:00 p.m., prevailing asstern Time</u>, before the Honorable Craig T. Goldblatt, in the United States Bankrupty Court for the District of Delaware, located at 824 North Market

PLEASE BE ADVISED: THE CONFIRMATION HEARING MAY BE CON-INUED FROM TIME TO TIME BY THE BANKRUPTCY COURT OR THE DEBTORS WITHOUT FURTHER NOTICE OTHER THAN BY SUCH ADJOURNMENT BEING OUNCED IN OPEN COURT OR BY A NOTICE OF ADJOURNMENT FILED WITH THE BANKRUPTCY COURT AND SERVED ON ALL PARTIES ENTITLED TO NOTICE.
